EDUCATION

Marwadi University

Rajkot, India

Bachelor of Technology in Computer Science (Cyber Security)

Sept. 2024 – May 2028

- Current Coursework Focus: Networking, Operating Systems, Databases, Secure System Design.
- Goal: Building a strong technical foundation through academic learning and practical security exploration.

TECHNICAL SKILLS

Languages: Java, SQL, Linux, NMap

Security Concepts: Password Hashing, Cryptography, OWASP Top 10, Intrusion Detection, Secure Coding

Tools & Frameworks: JDBC, Database Management Systems (DBMS), Networking Protocols

Soft Skills: Technical Writing, Documentation, Logical Thinking

TECHNICAL PROJECTS

Secure Password Manager | Java, JDBC, SQL, Cryptography

- Designed and developed a robust Java-based application to manage user credentials securely, focusing on the intersection of functionality and security.
- Implemented **Password Hashing** and cryptographic standards to ensure secure storage of sensitive data, mitigating unauthorized access risks.
- Engineered the backend using **JDBC** for seamless integration with an **SQL** database, ensuring data persistence and integrity.
- Built a secure user authentication system, applying clean application logic to validate credentials against stored hashes.
- Practiced secure coding techniques to defend against common vulnerabilities, gaining hands-on experience with data protection principles.

CERTIFICATIONS & TRAINING

Deloitte Australia - Cyber Job Simulation

- Completed practical simulation tasks mirroring real-world cyber security analysis and response scenarios.

Certified Cybersecurity Foundations Professional (CCFP)

- Gained comprehensive understanding of foundational cybersecurity principles and industry standards.

Introduction to Cybersecurity

- Acquired fundamental knowledge of network security, threats, and defensive strategies.

PROFILE SUMMARY

Second-year Cyber Security student driven by curiosity about system internals and real-world threat mitigation. Actively developing an "attacker's mindset" through CTF challenges and labs to better understand vulnerabilities. Disciplined learner seeking internship opportunities in software development or cybersecurity to apply skills in Java, SQL, and secure system design.
